

Vocabulary

For OnlyVibes

User: An individual who has access to the platform, can create an account, and view events along with their details.

Registered User: A user who has successfully created an account and can interact with event-related features, such as managing their profile, following venues, and submitting reviews.

Admin: A superuser that can manage functionalities of all users. He can also verify registered users.

Verified User: A registered user who has undergone a verification process, granting them permission to manage events and other privileges beyond those of a standard registered user.

System: The platform responsible for executing automated processes, including generating event recommendations, sending push notifications, and assigning user roles.

Venue: A business or entity that can create an account, manage its details, and organize events within the system.

Event: A scheduled activity or gathering that is hosted by a venue and can be viewed, filtered, and searched by users.

Manage Events (by Admin): The ability of an admin to view all events and delete them as they see fit.

Manage Registered Accounts: The ability of an admin to view all accounts and delete or suspend them as they see fit.

Event Recommendation: A system-generated list of events tailored to a user's preferences based on factors such as past interactions, followed venues, or liked events.

Push Notifications: A system-generated alert sent to users regarding event updates, reminders, or recommendations.

Assign roles: The ability of the system to display different options and pages to each user of the application in relation to their role.

Create Account: The process of registering a new user profile in the system.

View Events: The ability to see the list of available events.

Event Details: Information about a specific event, including description, date, and location.

Venue Details: Information about the organizer of an event. This includes the location of the venue, the operating hours, uploaded images and videos of the venue.

Search: The functionality that allows users to find events, venues, or other users based on input keywords.

Filtering: The process of refining search results based on selected criteria, such as date, location, or event type.

Event Reminder: A notification sent to a registered user to remind them about an upcoming event they have interacted with.

Manage Profile: The ability to edit personal details, including name, bio, and profile picture.

Review Event: A registered user's feedback on an event they attended, which may include text, ratings, images, or videos.

Like: The action of expressing interest in an event, which may contribute to personalized recommendations.

Follow: The action of subscribing to updates from a venue or verified user to receive event notifications and updates.

Manage Event (by Verified User or Venue): The ability to create, edit, or remove events from the platform.

Necessary information for account creation: The information for logging in to the system. This refers to an email address, a username and a password that are declared at sign up.

Necessary information about a venue: This refers to Tax Identification Number, Business Registration Number, Proof of Business Existence and Owner Details to verify that the business actually exists.

Necessary information for verification: The set of data required to verify a user's identity, including but not limited to government-issued identification, email confirmation, phone number validation, or other authentication methods as defined by the system.

Verification Status: The state of a registered user's verification process, which may include pending, verified, or rejected.

Verification Request: The action performed by a registered user to submit the necessary information for verification approval.

Personalized Recommendations: System-generated event suggestions based on user preferences and behavior.

Some of the event details: This refers to the top images of an event and the venue that hosts it, the name, location, starting time, date. It is limited information that appears on the title cards at the list view or the clicked pins on map view.

Update like counter: Incrementing or decrementing the like counter when a user likes an event, depending on whether the event is already liked or not by that specific user
